# 下載 R for macOS

- https://cloud.r-project.org/bin/macosx/

## R for macOS

This directory contains binaries for the base distribution and of R and packages to run on macOS. R and package binaries for R versions older than 4.0.0 are only available from the CRAN archive so users of such versions should adjust the CRAN mirror setting (`https://cran-archive.r-project.org`) accordingly.

Note: Although we take precautions when assembling binaries, please use the normal precautions with downloaded executables.

**R 4.5.3 "Reassured Reassurer" released on 2026/03/12**

Please check the integrity of the downloaded package by checking the signature:
`pkgutil --check-signature R-4.5.3-arm64.pkg`
in the *Terminal* application. If Apple tools are not avaiable you can check the SHA1 checksum of the downloaded image:
`openssl sha1 R-4.5.3-arm64.pkg`

**Latest release:**

For Apple silicon (M1,2,..) Macs:
R-4.5.3-arm64.pkg
SHA1-hash: 1e5e1d0f01f1d329b79647069d90220d8b00ab42
(ca. 98MB, notarized and signed)

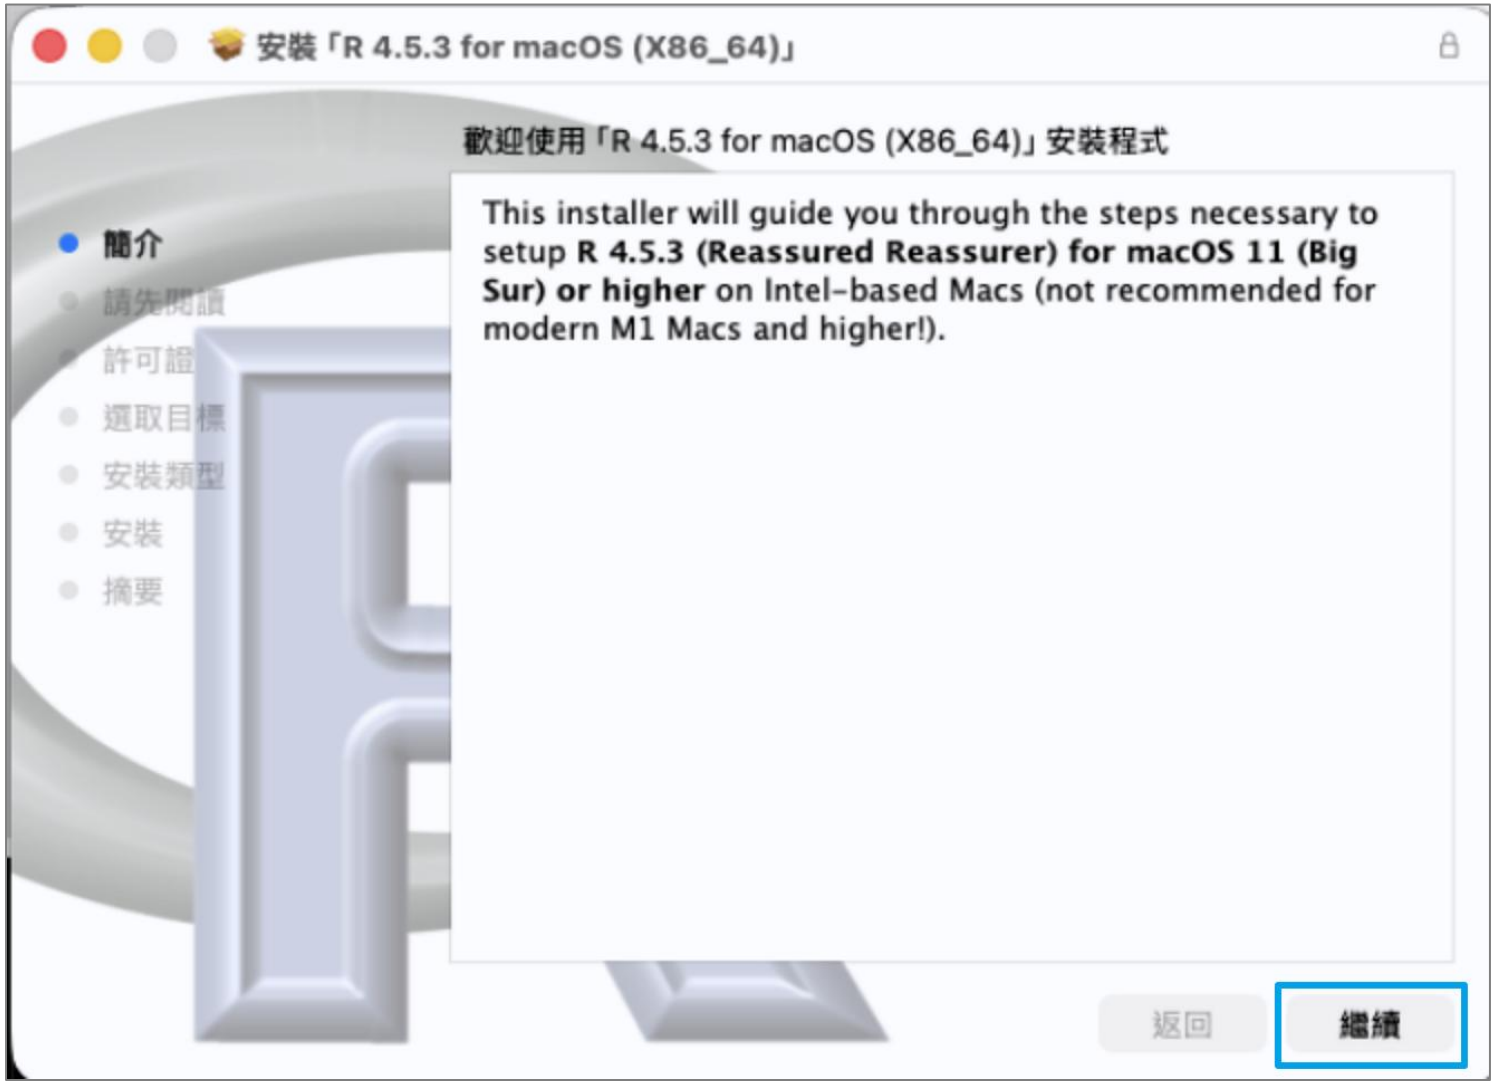
For older Intel Macs:
R-4.5.3-x86_64.pkg
SHA1-hash: 4c3cfda37f779c6b6931104c3f888643ac587e59
(ca. 101MB, notarized and signed)

**R 4.5.3** binary for macOS 11 (**Big Sur**) and higher, signed and notarized packages.

Contains R 4.5.3 framework, R.app GUI 1.82, Tcl/Tk 8.6.12 X11 libraries and Texinfo 6.8. The latter two components are optional and can be ommitted when choosing "custom install", they are only needed if you want to use the `tcltk` R package or build package documentation from sources.

macOS Ventura users: there is a known bug in Ventura preventing installations from some locations without a prompt. If the installation

# 安裝 R 4.5.3



安裝「R 4.5.3 for macOS (X86_64)」
歡迎使用「R 4.5.3 for macOS (X86_64)」安裝程式
This installer will guide you through the steps necessary to setup R 4.5.3 (Reassured Reassurer) for macOS 11 (Big Sur) or higher on Intel-based Macs (not recommended for modern M1 Macs and higher!).

# 步驟1 安裝 Rcmdr 套件

- Install.packages("Rcmdr")

```
>
> install.packages("Rcmdr")
also installing the dependencies ‘fs’, ‘rappdirs’, ‘bit’, ‘stringi’, ‘cachem’,
‘memoise’, ‘mime’, ‘sass’, ‘bit64’, ‘utf8’, ‘fracdiff’, ‘lmtest’, ‘timeDate’,
```

# 步驟2 載入 Rcmdr 套件

- library(Rcmdr)

```
>
> library(Rcmdr)
Loading required package: splines
Loading required package: RcmdrMisc
Loading required package: car
Loading required package: carData
Loading required package: sandwich
Loading required package: effects
Registered S3 method overwritten by 'lme4':
  method           from
  na.action.merMod car
lattice theme set by effectsTheme()
See ?effectsTheme for details.
tcltk DLL is linked to '/opt/X11/lib/libX11.6.dylib'
Error: package or namespace load failed for 'Rcmdr':
 .onLoad failed in loadNamespace() for 'tcltk', details:
  call: fun(libname, pkgname)
  error: X11 library is missing: install XQuartz from www.xquartz.org
>
```

先安裝 X11

# 下載並安裝 X11

XQuartz

The XQuartz project is an open-source effort to develop a version of the X.Org X Window System that runs on macOS. Together with supporting libraries and applications, it forms the X11.app that Apple shipped with OS X versions 10.5 through 10.7.

## Quick Download

| Download | Version | Released | Info |
|---|---|---|---|
| XQuartz-2.8.5.pkg | 2.8.5 | 2023-01-26 | For macOS 10.9 or later |

## License Info

An XQuartz installation consists of many individual pieces of software which have various licenses. The X.Org software components' licenses are discussed on the X.Org Foundation Licenses page. The quartz-wm window manager included with the XQuartz distribution uses the Apple Public Source License Version 2.

Web site based on a design by Kyle J. McKay for the XQuartz project.
